Summary

Full-Stack and Systems Developer with core expertise in C++, TypeScript, Rust, and scalable distributed architectures. Proven contributor with **30+ merged pull requests** across tier-1 codebases including **Microsoft VS Code**, **n8n**, and **Hono**. Experienced in developing enterprise fleet management platforms, low-latency Web2/Web3 applications, and high-throughput backend services.

Education

2024 – 2028	**B.Tech in Computer Science**, NMAM Institute of Technology, Nitte	CGPA: 8.9/10
2023	Class 12th (CBSE Board)	86%
2021	Class 10th (CBSE Board)	90%

Relevant Experience

Software Engineering Trainee — HPE (CPP-2 Project) Jun 2025 – Nov 2025

Helix — Enterprise Server Fleet Management System Live Demo

- Built **Helix**, a developer-first platform to automate enterprise hardware reservations, provisioning, and fleet observability.
- Engineered dynamic booking workflows, state synchronization, and fleet health monitoring, cutting allocation overhead by 40%.

Open Source Software Engineer 2024 – Present

- Authored and merged **30+ pull requests** across **Microsoft VS Code**, **n8n**, and **Hono**, resolving core upstream issues.
- Refactored backend data layers and optimized query execution, boosting throughput and reducing API latency by **30%**.
- Conducted university technical workshops on full-stack architecture, Git workflows, and Web3 development for **250+ students**.

Projects

CodeArena — Web3 Battleground | *Solana, TypeScript, React.js, Tailwind CSS* Live Demo

- Architected a Solana streak platform integrating non-custodial wallet adapters for automated staking and slash penalties.
- Implemented real-time blockchain transaction state listeners, decreasing client synchronization latency by 35%.

TokenEstate — Fractional Real Estate Protocol | *Rust, React.js, Vite, MongoDB, REST APIs* Live Demo

- Developed asset pricing calculations in Rust, securing backend transaction logic for fractional asset trading.
- Designed indexed MongoDB collections and REST APIs to handle concurrent portfolio balance sync and trade execution.

Track Bharat — Civic Analytics Portal | *React.js, Supabase, PostgreSQL, Tailwind CSS* Live Demo

- Created a civic portal tracking legislative promises vs. delivery via pincode lookup, voting metrics, and interactive maps.
- Built relational PostgreSQL schemas with Supabase Row-Level Security (RLS) to ensure public polling integrity.

Skills

Languages:	C++, JavaScript, TypeScript, Rust, Java, Python, SQL, Solidity
Frontend:	React.js, React Native, Vite, Tailwind CSS, Next.js, HTML5, CSS3
Backend:	Node.js, Express.js, Hono, RESTful APIs, WebSockets, Microservices
Databases & Cloud:	PostgreSQL, MongoDB, Supabase, Firebase, Docker, AWS
Developer Tools:	Git, GitHub, Linux, Postman, CI/CD, VS Code API
Core Concepts:	Data Structures & Algorithms, System Design, Database Modeling, OOP

Achievements

- **1st Place Winner** – HP (Hewlett Packard) College Hackathon for architecting and deploying an end-to-end software solution.
- **Semifinalist** – Flipkart GRID 8.0 (National-level technical competition among 100,000+ engineering applicants).
- **Problem Solving & DSA** – Solved **600+** algorithmic challenges across LeetCode/Codeforces; Codeforces **Specialist** (1401).
- **Top 100 Candidate** – JETRO Talent for Japan 2025 (Selected among 5,000+ candidates across India).
- **Ecosystem Grantee** – Awarded technical development grant by **Superteam India** for impactful Web3 contributions.
- **Hackathon Honors** – Top 10 Finalist at M# Techtatva (MIT Manipal) and Blockchain Track Winner at Alvas Institute of Tech.
